

Pre-installation Steps

- Install graphviz for PlantUml .

Graphviz for windows:

http://www.graphviz.org/Download_windows.php

- To run the umlparser type:

For class Diagram:

`<umlparsername>.jar <sourceFolderPath><DestinationFilewithPath> class`

For sequence Diagram

`<umlparsername>.jar <sourceFolderPath><DestinationFilewithPath> sequence`

This parser generates the output file in .png format.

Tested with(Class Diagram):

`<umlparserClass.jar> <C:\Users\Navjot\workspace\umltest1\src> <C:\Navjot\202\outputparser\1.png>`

where:

`<umlparserClass.jar>--` is the jar file

`<C:\Users\Navjot\workspace\umltest1\src>` -- is source folder where all java files are kept

`<C:\Navjot\202\outputparser\1.png>` -- is the destination file with full path

Tested with(Sequence Diagram):

`<umlparserSeq.jar> <C:\Users\Navjot\workspace\umltest1\src\seq> <C:\Navjot\202\outputparser\1.png>`

where:

`<umlparserSeq.jar>--` is the jar file

`<C:\Users\Navjot\workspace\umltest1\src>` -- is source folder where all java files are kept

`<C:\Navjot\202\outputparser\2.png>` -- is the destination file with full path

Libraries used:

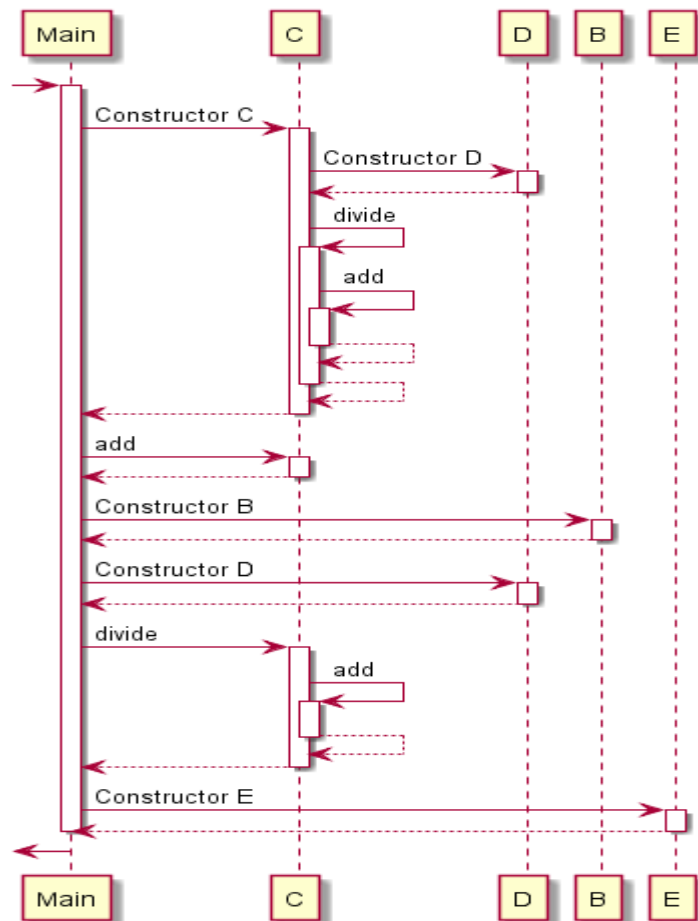

plantuml-8008.jar ---> for drawing the diagrams from the grammer

apache-commons-lang.jar ---> Some of string functions like (obj.containsIgnoreCase) which are not available in java libraries.

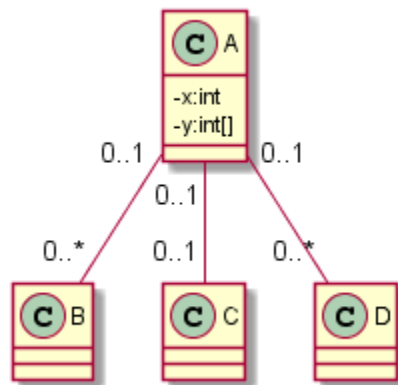

javaparser.jar --> for visiting the classes

Output:

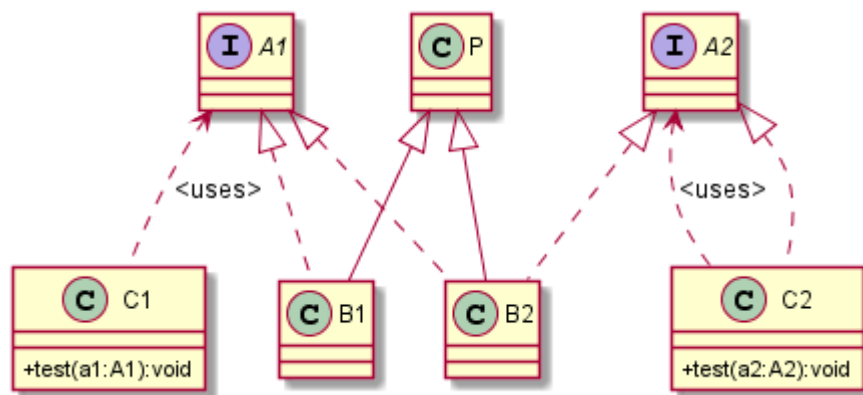

a)Sequence diagram---my test case--given in floder

Class Diagram --test case 1---

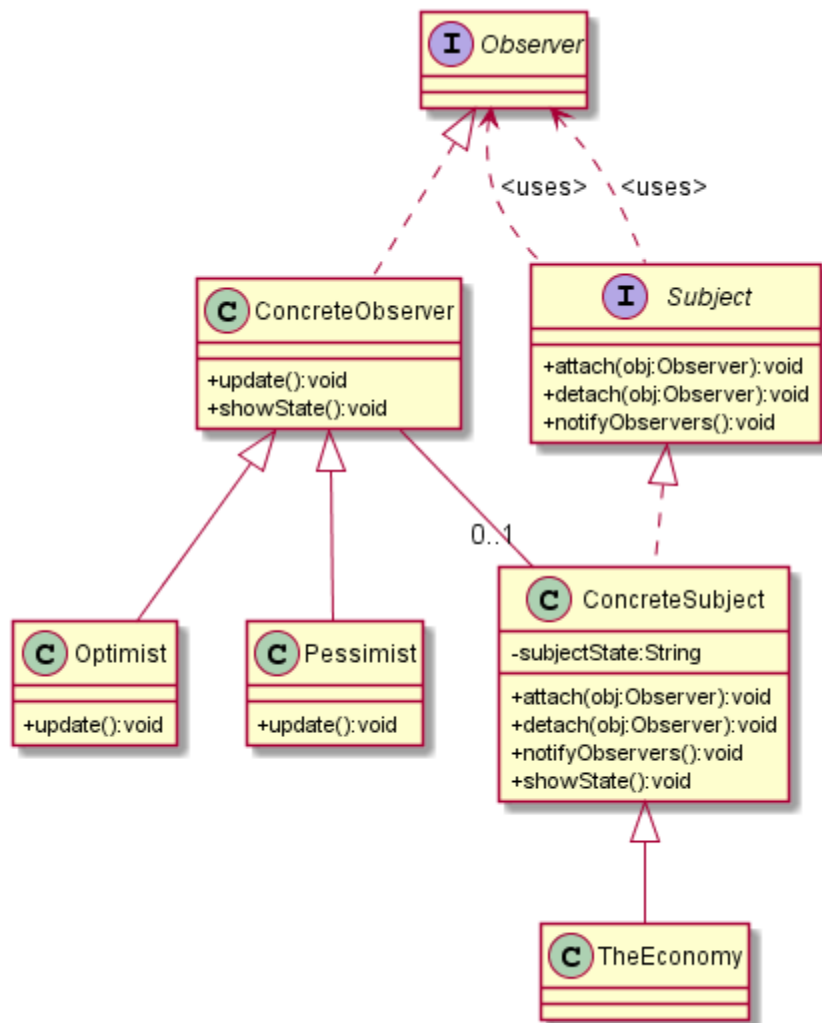

Class Diagram --Test case 2--

Class Diagram --Test case 3--

Class Diagram---Test 4 ---

Class Diagram --Test case 5--
